RE: City Hydrants

To Whom it May Concern,

The water department in the City of North Vernon currently owns and operates 387 fire hydrants. The water department flushes hydrants three times per year for operational maintenance. At the conclusion of our last hydrant flushing session, which was May 2nd, 19 hydrants were deemed inoperable. Due to public safety concerns, the specific locations of these hydrants are unavailable. As is standard practice, the city water department is working closely with local contractors to repair or replace these hydrants in a timely manner.

Best regards,
Will Spencer
City of North Vernon Water Superintendent
